

Cable tray prices in China and Europe

Overview

Discover the latest cable tray price per meter in 2026, including steel, wire mesh, and aluminum tray costs.

Key Takeaways

Cable tray prices vary by material and region, with Chinese factory-direct prices ranging from \$0.80 to \$76 per unit, while European steel trays are generally higher due to material and regulatory standards. Prices in China

In China, cable trays are widely available through B2B platforms like Alibaba and Made-in-China, offering competitive factory-direct pricing. Typical price ranges include:

- Stainless Steel (SS 304): \$5-\$76 per unit depending on size, thickness, and customization options
 - Galvanized Steel: \$0.80-\$50 per unit, commonly used for industrial and commercial installations
 - Aluminum: \$2-\$60 per unit, valued for lightweight and corrosion resistance Bulk purchases significantly reduce per-unit costs, and OEM or factory-direct options allow for customization to meet specific load capacities and environmental requirements . Prices are influenced by material quality, tray type (ladder, ventilated, solid bottom, wire mesh), and certifications such as CE for industrial applications .
- Prices in Europe

In Europe, steel cable trays are generally more expensive due to higher raw material costs, stricter safety standards, and environmental regulations. Key points include:

- **Stainless Steel and Galvanized Steel Trays:** Prices are typically higher than in China, often ranging from €20 to €150 per unit depending on size, type, and corrosion resistance
- **Aluminum Trays:** Lightweight and corrosion-resistant options are available, usually priced slightly lower than stainless steel but still higher than Chinese equivalents. European trays are used extensively in power distribution, communication, and control systems, with a growing trend toward corrosion-resistant and environmentally friendly materials. Market growth is driven by infrastructure projects, industrialization, and construction activities.

Factors Affecting Prices

- **Material Type:** Stainless steel is the most expensive, followed by aluminum and galvanized steel.
- **Tray Type:** Ladder trays and ventilated trays may cost more due to manufacturing complexity.
- **Certification and Compliance:** CE-certified trays or those meeting fireproof and industrial standards command higher prices.
- **Volume and Procurement Method:** Bulk orders and factory-direct purchases reduce unit costs, especially in China.
- **Market Trends:** Rising construction, renewable energy projects, and digital infrastructure expansion influence demand and pricing.

Summary

- **China:** \$0.80-\$76 per unit, highly competitive, suitable for bulk industrial projects.
- **Europe:** €20-€150 per unit, higher due to material quality, compliance, and market standards. When sourcing cable trays, consider material, tray type, certification, and order volume to optimize cost and ensure compliance with local regulations.
