

Distribution Box Press-Type

Overview

Press Boxes The PSC Press Train Passive Audio Distribution Box is designed for use with the PSC Press Bridge (sold Broadcast / AV Production | Press Boxes.

Key Takeaways

A press-type distribution box, or mult box, is a professional audio device that distributes a single audio source to multiple independent outputs for press, broadcast, or live events.

Overview
A press-type distribution box (also called a mult box) is designed to allow multiple users—journalists, broadcasters, or recording devices—to access the same audio feed simultaneously without signal degradation. These devices are widely used in press conferences, live events, and studio setups to ensure clean, isolated audio distribution .

Key Features

- **Multiple Outputs:** Typically, press boxes provide 12 to 16 high-quality balanced outputs, each individually transformer-isolated to prevent hum and interference .
- **Input Flexibility:** They accept microphone-level or line-level inputs, often switchable per output, allowing compatibility with various audio sources .
- **Signal Isolation:** Each output is isolated to prevent electrical interference between connected devices, ensuring clean audio for all users .

- **Digital Integration:** Modern press boxes support digital audio networking protocols like Dante, enabling seamless integration with laptops, tablets, and digital audio systems .
- **Portability and Power:** Many units feature built-in Li-Ion batteries for portable operation, while rack-mounted versions provide permanent installation options .
- **Expandable Systems:** Some press boxes can connect to expanders, increasing the number of outputs for larger events .

Types

- **Active Press Boxes:** Include built-in amplification and sometimes digital interfaces, suitable for both indoor and outdoor events .
- **Passive Press Boxes:** Simple distribution without amplification, relying on the input signal strength.
- **Rack-Mounted Units:** Designed for permanent installations in studios or broadcast facilities, often with Dante or USB-C digital outputs .
- **Portable Units:** Compact, battery-powered devices for field use, often in rugged road cases .

Applications

- **Press Conferences:** Distribute a single microphone feed to multiple reporters and recording devices.
- **Broadcasting:** Provide isolated audio feeds to cameras, mixers, and live streaming equipment.
- **Event Production:** Ensure consistent audio distribution across multiple zones or devices without signal loss.

Example Models

- **AudioPressBox APB-D216R-D:** 2-line inputs, 16 Line/MIC outputs, Dante interface, battery-powered, expandable to 6 additional units .
- **Whirlwind PressPower 3:** Wall-mount or portable, 2 mic/line inputs, 14 transformer-isolated outputs, individual gain controls .
- **APB-320-C-D-USB:** 2 analog inputs, 1 digital USB-C input/output, 16 analog and 4 digital outputs, suitable for indoor/outdoor press events . These devices ensure that all connected users receive high-quality, isolated audio, making them essential tools for professional media coverage and live event audio management.
