

Does the Huawei 910 use an optical module

Overview

Huawei 910b optical module It combines two 910b chips on a single board to deliver up to 800 TFLOP/s in FP16 mode.

Key Takeaways

Yes, the Huawei 910 supports optical modules through its GE optical interfaces for fiber communication.

The Huawei OptiX RTN 910, including variants like the PTN 910-F, is designed to support Ethernet over optical fiber using integrated optical interfaces. Specifically, the PTN 910-F system integrates 4 GE optical ports, alongside 4 GE/FE electrical ports and 16 E1 interfaces, enabling flexible service aggregation and high-speed data transmission over fiber networks (Huawei TNEMHOST0000 PTN 910-F System 4xGE Optical 4xGE/FE 16xE1) . These optical ports rely on optical modules, which are photoelectric converters that transform electrical signals into optical signals and vice versa, allowing the device to transmit data over fiber-optic links . The optical modules in the Huawei 910 operate at the physical layer, supporting high-bandwidth Ethernet services and enabling seamless integration with metro and aggregation networks. They are compatible with standard fiber-optic cabling and can be used for both long-distance and high-capacity backhaul applications, making the device suitable for carriers, ISPs, and enterprise networks . In summary, the Huawei 910 does use optical modules via its GE optical interfaces, providing fiber connectivity for Ethernet and TDM services, and allowing flexible deployment in modern network infrastructures .
