

Electricity box obstructs elephant

Overview

Non-lethal electric fences act as a deterrent for elephants by giving a high voltage (>5,500 volts), pulsed, non-lethal shock when touched (Kamdar et al. The study found that the adult males, the ecological keystones of elephant population, were found to be most affected by anthropogenic factors, particularly electrocution and retaliatory killings (199). Issuing a press release the CEB called for a collective effort to protect wild elephants from such incidents calling. Human-elephant conflict is an enormous challenge for farmers, conservationists, and political leaders to deal with. In some cases, it. In Indonesia's Aceh province, farmers are installing electrified fences to protect their crops from elephants, whose forest habitats are continually shrinking. Photo: Ashis Senapati Wild elephants in Odisha face imminent danger from live electric wires.

Article Content
