

How to find the MAC address through the core switch

Overview

Locating a device's MAC address on a Cisco switch port is a fundamental skill for network administrators.

Key Takeaways

You can find the MAC address of devices connected through a core switch by using the MAC address table and tracing the port to the access switch. Steps to Find a MAC Address from the Core Switch

- Access the Core Switch
- Connect via SSH or console to the core switch.
- Enter privileged EXEC mode using the enable command if required.
- View the MAC Address Table
- Use the command `show mac address-table` on Cisco switches to display all learned MAC addresses and the associated ports and VLANs .
- Example:

```
Switch# show mac address-tableVlan Mac Address Type Ports-----  
a1b2.c3d4.e5f6 DYNAMIC Gi1/0/1
```

- This shows the MAC address, VLAN, type (dynamic or static), and the port on the core switch where the MAC was learned.

- Identify the Port Leading to the Access Switch
- On a core switch, the MAC table will only show addresses that are layer 2 adjacent through the core. The port listed is typically the uplink to the access switch where the end device is connected .
- If multiple MAC addresses appear on a single port, it usually indicates a trunk connecting to an access switch with multiple devices.
- Trace to the Access Switch
- Once you identify the uplink port, log in to the corresponding access switch.
- Run show mac address-table on the access switch to find the exact port where the end device is connected .
- This allows you to pinpoint the physical interface of the device.
- Optional: Find the Switch's Own MAC Address
- To find the MAC address of the switch itself (used for STP or VLAN 1), use show version. The output will display the Base Ethernet MAC address .

Notes

- Each switchport may have its own MAC address, especially on Layer 3 switches configured as routed ports .
- Dynamic MAC entries are learned automatically and may age out after a period, while static entries remain until manually removed .
- This method works for both Cisco and Juniper switches, though command syntax may vary slightly. By following these steps, network administrators can efficiently trace MAC addresses from the core switch down to the specific access switch port, aiding in troubleshooting, monitoring, and network management.

Commands to Find Device Mac Address on Cisco Switch Port

To find the MAC Address on a Cisco switch port, we use the command show mac-address-table. Let's understand the

Finding switch & port using MAC add

At the core, you can use "sh ip ar | inc .ab01" this will tell you what vlan has that mac address and if you have vlans

How to Find a Device MAC Address on a Cisco Switch

Locating a device's MAC address on a Cisco switch port is a fundamental skill for network administrators. Whether you're enforcing

How to trace end user connected from which L2 switch

This command will tell you which port the MAC address is associated with on the switch. If it points to an uplink port,

How to see mac address of the switch that you are currently on

Yes, each switchport has it's own MAC address, I think this is how the switch itself (ASICs) makes forwarding decisions. Not quite

From core : Finding Mac address and port interface of the end device ...

The mac table on the core will only contain addresses layer 2 adjacent through the core switch and show on the

MAC Address Table On a Cisco Switches

Dynamic: Through a process known as MAC learning, in which the switch retrieves the source MAC address (and

How to find IP & MAC addresses on Cisco IOS Devices

As a Network Administrator/Engineer you may be asked to find MAC addresses and/or IP Addresses, hopefully this

HowTo: Find switchport for a MAC Address on a Cisco Catalyst Switch

If you have a big network with multiple Access Switches connecting to the core switches or routers then tracing a device like a PC or

Back to Basics: Network Tracing

This command will show the internal MAC address-table of the switch or router that you are on. This will give you the

Back to Basics: Network Tracing

Network tracing can act as an extremely useful tool within any networking admin's toolset. Network tracing is a basic

Commands to Find Device Mac Address on Cisco Switch Port

At times, network and IT admins face challenge to find out which port of the switch is a specific device mac address

How to Find a Device MAC Address on a Cisco Switch

Locating a device's MAC address on a Cisco switch port is a fundamental skill for network administrators. Whether you're enforcing

From core : Finding Mac address and port interface of the end device ...

The mac table on the core will only contain addresses layer 2 adjacent through the core switch and show on the

2025 Network Switch MAC Address: Easily Find, Add, or Delete

Managing MAC addresses through your network switch clearly simplifies device management, strengthens security,

Finding out MAC addresses of devices PHYSICALLY connected to switch

The reason is that throughout the growth of the inventory the map has changed drastically, at one point showing a

How To Find MAC Address On Switch?

How To Find MAC Address On A Network Switch Finding the MAC address on a network switch is crucial for network

Tracing a MAC address in multi-layer network

Hi all, I have a MAC address of a PC which is at the access layer, I have access to the Core layer switch, considering that the entire

Obtaining Layer 2 MAC Address

Yes you can - ping the device from the L3 core switch, then show the arp for that ip address - sh arp | in x.x.x.x this

Chasing MAC Addresses

For example the core switch will show you what port the mac address in question is coming from, which will be the uplink port from

Find Switch and Port using Macaddress on Port-Channel

Hello together, I need to know which Device is connected to a switch port. My starting Point is on Coreswitch where I

Switch MAC Address

Usually we do not need to know switch MAC address however, if you indeed need it this article of how to get MAC address of a

Decoding MAC Address Lookup: Identify Any Device on Your Network

Learn how to perform a MAC address lookup to identify device manufacturers, map network connections, and audit Cisco switches.

mac address

Good morning, How do I find out which port on a Cisco switch is connected to a particular MAC address? I recently
