

Price of TBB high and low voltage complete sets of equipment in West Africa

Overview

This equipment is suitable for AC systems with a frequency of 50 (60) Hz, a rated operating voltage of 690V or less, and a rated TBB high-voltage react.

Key Takeaways

TBB low-voltage solar and battery systems range from approximately KSh 12,000 to KSh 375,000, while high-voltage complete electrical equipment prices vary depending on capacity and configuration.

TBB offers low-voltage (48Vdc) lithium and lead-carbon battery systems suitable for off-grid and backup power applications. These systems include inverters, chargers, and battery storage integrated into a complete set. Prices for smaller residential or commercial systems in East Africa (as a reference for West Africa) are approximately:

- Single-unit inverters and chargers: KSh 12,000–KSh 13,500
- Complete off-grid solar power systems (2kW–4kW): KSh 73,000–KSh 165,000

- High-capacity all-in-one systems (up to 6 units in parallel): KSh 255,000–KSh 375,000 These systems support parallel and three-phase operation, have 0ms UPS transfer time, and include MPPT solar charge controllers for efficient energy management. They are ideal for off-grid homes, small businesses, and mission-critical loads, with remote monitoring via the NOVA online portal for real-time control and data logging .

High-Voltage TBB Equipment

High-voltage TBB equipment includes 6kV, 10kV, and 35kV complete sets, typically used in substations and industrial power systems. These sets consist of:

- High-voltage switchgear (vacuum or SF6 circuit breakers)
- Series reactors and discharge coils
- Zinc oxide lightning arresters
- Capacitor banks and protection fuses
- Transformers and bus connections The equipment is designed for voltage regulation, power factor correction, and network stability, with indoor cabinet, frame, or collective configurations depending on capacity. Prices for high-voltage complete sets are highly variable, depending on rated voltage, kVA capacity, and configuration, but typical industrial-grade systems in the 6kV–10kV range can cost tens of thousands to hundreds of thousands of USD per set, with 35kV systems reaching higher values due to larger capacity and complexity .

Considerations for West Africa

- Import and shipping costs: Prices may increase due to logistics, customs duties, and local taxes.
- Local distributors: West African suppliers may offer package deals or installation services.
- Customization: TBB systems are modular, allowing scaling of capacity, which affects pricing.
- Currency conversion: Prices listed in Kenyan Shillings or USD should be converted to local West African currencies for accurate budgeting. In summary, low-voltage TBB complete sets for residential or small commercial use range roughly from KSh 12,000 to KSh 375,000, while high-voltage industrial sets vary widely based on specifications, often costing several tens of thousands of USD. For precise pricing in West Africa, contacting authorized TBB distributors or local resellers is recommended to account for shipping, installation, and local market conditions.
