

Price of the bottom of the indoor electrical distribution box at the construction site

Overview

Junction Box Cost Guide: Prices & Installation 2026A junction box can cost anywhere from around \$10 for a simple indoor plastic box to several hundred doll.

Key Takeaways

The cost of the base or bottom part of an indoor electrical distribution box typically ranges from \$50 to \$300 depending on material, size, and quality.

The price of the bottom part of a distribution box depends on several factors:

- **Material:** Plastic enclosures are the most budget-friendly, usually costing between \$50 and \$100 for a basic indoor unit, while metal or steel bases can range from \$150 to \$300 for enhanced durability and impact resistance .
- **Size and Capacity:** Larger boxes designed to accommodate more circuits or higher amperage require more material and may cost more. Standard residential indoor units are smaller and less expensive, whereas commercial or industrial bases are larger and more robust .
- **Construction Quality:** Powder-coated steel or stainless steel bases are more expensive but offer longer lifespan and better protection against corrosion, which is important in industrial or semi-exposed construction environments .

- Pre-assembled vs. Empty Base: Some distribution boxes come pre-wired with breakers and busbars, which increases the total cost. If you only need the bottom enclosure, prices are lower, typically reflecting just the shell .

Typical Price Ranges

- Plastic indoor base: \$50-\$100
- Metal indoor base (steel or aluminum): \$150-\$300
- High-end industrial-grade base: \$300+ depending on size and specifications

Additional Considerations

- Installation: Labor is usually extra and can range from \$100 to \$300 depending on complexity and local rates .
- Compliance: Ensure the base meets local electrical codes and safety standards, especially for construction sites.
- Customization: Some projects may require specific mounting configurations or integrated features, which can increase the cost. In summary, for a standard indoor construction site distribution box, the bottom part alone is generally \$50 to \$300, with plastic being the most economical and metal or industrial-grade options at the higher end of the range .
