

Soup Processing Site Distribution Box Installation Manufacturer

Overview

Soup & Sauce Manufacturing Equipment | DC Norris From creamy bechamel sauce to complex bone broth-based dishes like pho, our experienced food Food & Bevera.

Key Takeaways

Leading manufacturers and service providers for soup processing site equipment and distribution box installation include DC Norris North America, C.D. Smith Construction, and Apex Food Source. Key Manufacturers and Service Providers

DC Norris North America specializes in industrial food processing equipment for soups, sauces, and ready meals. They provide end-to-end support, including process design, equipment installation, commissioning, and ongoing spares. Their portfolio includes cooking, chilling, can opening, can crushing, powder entrainment, and rotary tumble chillers, suitable for both smooth and particulate soup recipes. They serve clients across the US and Canada, including major brands like Heinz, Kroger, and Amy's Kitchen, ensuring compliance with NSF and food safety standards. C.D. Smith Construction offers turnkey food and beverage facility construction, including the installation of processing lines, hoisting and rigging, chill tunnels, conveyors, ovens, tanks, and silos. Their team of millwrights and technical experts ensures proper equipment installation, leveling, and integration with minimal disruption to operations. They also provide design/build services, pre-construction planning, and project closeout, making them a strategic partner for large-scale soup production facilities. Apex Food Source focuses on soup manufacturing and co-packing, producing liquid soups and bases in various formats such as glass jars, pouches, pails, and drums. They offer multiple filling methods, including jar/bottle piston fill lines, and can handle both small and large batch production. Apex is ideal for companies seeking flexible packaging and co-packing solutions alongside processing equipment support.

Considerations for Distribution Box Installation

When installing distribution boxes or process control panels in soup processing sites, manufacturers typically provide:

- Custom design to integrate with existing processing lines
- Electrical and control system installation for automated filling, cooking, and cooling operations
- Compliance with food safety and sanitation standards
- Support for high-volume production and scalability for future expansion

Summary

For companies looking to set up or upgrade a soup processing facility, DC Norris North America provides specialized equipment and installation services, C.D. Smith offers comprehensive facility construction and process line integration, and Apex Food Source delivers co-packing and flexible production solutions. Partnering with these manufacturers ensures efficient, compliant, and scalable soup production operations.
