

Wavelength Division Multiplexing Board

Overview

Wavelength Division Multiplexers (WDMs) enable end users to channels of light in premium and high isolation grades. Available in premium grade 1310/1550nm variations, select from light, medium and heavy duty casings. In fiber-optic communications, wavelength-division multiplexing (WDM) is a technology which multiplexes a number of optical carrier signals onto a single optical fiber by using different wavelengths (i. Wavelength division multiplexers let you expand the bandwidth of optical communication networks and can be used at several locations within each. Wavelength division multiplexers are fundamental to the functioning and performance of integrated photonic circuits, with applications ranging from optical interconnects to sensing and quantum technologies.
